

STEP II, 2006, Q10

- 10 Three particles, A , B and C , of masses m , km and $3m$ respectively, are initially at rest lying in a straight line on a smooth horizontal surface. Then A is projected towards B at speed u . After the collision, B collides with C . The coefficient of restitution between A and B is $\frac{1}{2}$ and the coefficient of restitution between B and C is $\frac{1}{4}$.
- (i) Find the range of values of k for which A and B collide for a second time.
- (ii) Given that $k = 1$ and that B and C are initially a distance d apart, show that the time that elapses between the two collisions of A and B is $\frac{60d}{13u}$.
